

Reflection on Assignment 4

We had the chance to visit Petronas and Huawei on November 17, 2023. It's a wonderful opportunity for me to learn new things and a wonderful experience all around. Petronas has released some of its most recent developments, including drone inspection and the Petronas Cloud solution. I discovered throughout this sharing session how important it is for technological advancements to improve human lives by boosting efficiency and facilitating quicker access to data. In addition, they showcased several of their cutting-edge items to us during our tour to the Huawei Innovation Center, which increased my understanding. During this excursion, I acquired diverse understanding about the ICT business as opposed to what I had learnt in the classroom. For instance, the Huawei IdeaHub Board has dual WiFi and allows the user to flip pages in reverse control for genuinely flexible iteration. Thus, this industrial visit was a worthwhile experience that expanded my knowledge of cutting-edge technologies, which is highly beneficial to me. In the future, I also hope that our faculty will be able to arrange additional industrial visits.
