

PC Assemble

Reflection on PC Assemble

We have a lab activity on 22 November 2023, which is PC assembly. I now know how to reassemble and assemble PC. In addition, I discovered that a PC is made up of several major components, including the motherboard, power supply, RAM, HDD, CPU and so on. Through hands-on lab work, this activity gave me the fundamental knowledge needed to handle PC installation and productivity tools. It's also a fantastic experience because I can learn more about computer hardware.
