

### **Reflection on Assignment 3**

Through this talk, I've gained knowledge about the definition of analytics and its significance to companies. The speaker also inspired us to achieve by emphasizing the need for us to always try new things, collaborate with others in teams, and have confidence in our abilities. I need to sharpen my technical abilities if I want to work as a system developer in the next four years. For instance, by performing more coding tasks, I can improve my knowledge of programming languages like Java, Python, SQL, and so on. Furthermore, since database systems are so important to the subject of system development, I should be well-versed in them. The next most crucial skill I need to practice is soft skills. I should improve my problem-solving and communication skills because these are essential in a collaborative development surroundings.
