

### **Reflection on Assignment 3**

On 17<sup>th</sup> November 2023, we had the opportunity to visit Petronas and Huawei. It is a great experience for me as well as a nice way for me to gain new knowledge and information. Petronas has shared their latest innovations such as Petronas Cloud solution and drone inspection. Through this sharing session, I learned that technology innovations are crucial in helping human life by increasing the productivity and making data more accessible which result in making our life easier. Besides, during the visit at Huawei Innovation Centre, they presented us many of their innovation products that utilized the state-of-the-art technology which expand my knowledge. Through this visit, I learned various knowledge of the ICT industry instead of the knowledge learned from the classroom. For example, Huawei IdeaHub Board features dual WiFi and allow reverse control which the user can turn pages for truly flexible iteration. So, this industrial visit was a meaningful experience and it really broaden my horizons about the technologies innovation which are very helpful for me. I also hope that our faculty can organise more industrial visit in the future.
